Project:  **Superstore Sales Analysis & KPI Dashboard** 

Author: Likitha Pasupulety 

Version: 1.0 

Date: April 8, 2025 

Executive Summary

This project analyzes retail sales data from a fictional superstore to uncover performance insights across product categories, regions, and customer segments. It includes a KPI dashboard for tracking revenue, profit, orders, and customer trends over time to aid in data-driven decision-making.

Business Objectives

- Identify high and low-performing product categories and regions.
- Track financial performance using KPIs (revenue, profit, etc.).
- Detect trends and seasonality in sales.
- Recommend strategies to optimize inventory and boost sales.

Scope

In Scope:

- Data cleaning and transformation
- Visualization of KPIs and trends
- Regional and product-level performance analysis
- Insights and recommendations based on patterns

Out of Scope:

- Real-time sales forecasting
- Integration with live POS or ERP systems

Data Sources

Source 	Description 
Superstore XLS File	Order-level data including customer, sales, and shipping info

Fields include:

- Order Date, Ship Date, Product ID, Category, Sub-Category
- Customer Info, Segment, Region, Sales, Quantity, Profit, Discount

Stakeholders

Role 	Purpose 
Sales Managers	Monitor category and product performance

Executives	Review company-wide KPIs and growth
Regional Managers	Focus on regional opportunities
Inventory Analysts	Align stock planning with trends

Key KPI Metrics [↗](#)

KPI ↗	Description ↗
Total Sales	Sum of all order revenue
Total Profit	Revenue minus costs
Profit Margin (%)	Profit / Sales * 100
Number of Orders	Total number of individual orders
Avg Order Value (AOV)	Sales / Order Count
Sales by Region	Performance across geographic areas
YoY Growth	Year-over-year comparison of KPIs
Top Products	Highest-selling products by revenue

Functional Requirements [↗](#)

ID ↗	Requirement Description ↗
FR1	Import and clean the Superstore dataset
FR2	Build a dashboard with KPI cards (Sales, Profit, Orders, AOV)
FR3	Enable filtering by Region, Segment, Year, and Category
FR4	Visualize trends via line/bar charts and heatmaps
FR5	Highlight top/bottom performers with conditional formatting

Non-Functional Requirements [↗](#)

- Responsive layout with fast loading (Power BI, Tableau, or Streamlit)
- Clear tooltips and filters for usability
- GitHub project with documented code and screenshots
- Confluence page for write-up, insights, and dashboard walkthrough

Assumptions [↗](#)

- Dataset includes full yearly data across multiple categories and regions.
- Stakeholders prefer interactive visuals over raw tables.

Constraints [↗](#)

- Static dataset (not connected to a live data source)

- Limited to historical analysis
- No integration with other internal systems (ERP, CRM)

Success Criteria [↗](#)

- Interactive dashboard with slicers and filters
- Accurate KPI tracking with clear visuals
- Insights that help improve sales, reduce losses
- Well-documented GitHub and Confluence pages

Example Insights [↗](#)

"The South region has the highest order volume but lowest average profit per order. Marketing efforts could shift toward high-margin regions like the West."

"Office Supplies consistently generate high sales but minimal profit—suggest reviewing pricing or supplier terms."
